

Scaggs *MotoDesigns* THE ADVENTURE MACHINE SHOP

Thank you for purchasing a

ADV Rack for your KTM 790,890,1090,1190,1290 Adventure

Mounting is easy!!

1. Remove the factory luggage rack
2. On some models, remove the screws attaching the grab handles from the center rack.
3. Place the new rack on top of the handles and install the rear 2 M8x60 flat head screws first, do not tighten them down.
4. Install the 19.5mm tall spacers between the rack and the grab handles under the front 2 holes in the rack, then install the M8x80 flat head screws
5. Tighten the four screws up and that's it.

This rack is ready for the installation of a Rotopax Pack mount. Install the pack mount prior to bolting the rack to the bike using 5/16-18 bolts to mount from the bottom of the rack. The round universal mounting flange that comes with the pack mount will not be used in this application.

A Givi Monokey case can easily be mounted. You'll need to purchase a top case mounting kit, which are readily available on Amazon for around \$30. Attach the 2 mushroom clamps to the front 2 M6 tapped holes, and the pyramid block to the rear most 1/4" holes that are 1" apart at the rear. Once installed, you'll be able to mount an Monokey Top Case.
